

The Architectural Styles of Islamic Domes in Morocco

Author: Abdel Aziz Salem¹

Abstract: The study of architectural styles in the Moroccan domes are one of the important studies, which aim of the disclosure of the uncertainty surrounding the building of the dome and its development in Morocco in the Islamic period. In spite of technical value for the building domes in Morocco, it has not received the attention and care as necessary of researchers and scholars about the Moroccan domes and its architectural evolution and ornamental methods. May be due to many changes and additions of domes and led to the disappearance of the most important assets and elements of architectural ornamental. This study deals with Islamic domes inventory remaining in Morocco and to clarify their style and methods of architectural and decorative effects follow the architectural and artistic influences on the dome of Morocco. The study also examined the written lines executed Moroccan domes, and to identify their artistic styles.

Keywords: architectural styles, Islamic domes, Moroccan domes.
